Extensions AutoCAD's extension system was built to enable third-party developers to create their own tools for AutoCAD. AutoCAD Extensions can be added to the drawing environment, shared with other users or sold commercially. They have to be programmed using the programming language VBA, Visual Basic for Applications, which allows them to perform actions in AutoCAD and, unlike VBA's macro language, is object-oriented. AutoCAD extensions are stored in a library that can be loaded into a document. They are organized into modules with their own functionalities, and can also have their own user interface, displayed either as a dialog box or using the ribbon interface. Several types of extensions can be used: Model-centric add-ons, which are used to automate the model creation process. They can be loaded with a project or stored as individual files, with an extension of.ados. Drawing-centric add-ons, which are used to automate the editing of the drawing.
